APPENDIX A: **GERMANET DATA DESCRIPTION**:

GermaNet is an online lexical-semantic database for German that has been structured along the same lines as the Princeton WordNet for English. It models nouns, verbs, and adjectives in their basic semantic relations like hyponymy, meronymy, and antonymy, and constitutes a basic resource for word sense disambiguation within NLP applications.

The development of the GermaNet resource has been directed by Prof. Erhard Hinrichs and has been supported by research grants awarded to Prof. Hinrichs by the Ministerium für Wissenschaft und Kunst Baden-Württemberg (MWK), the Bundesministerium für Bildung und Forschung (BMBF), the Deutsche Forschungsgemeinschaft (DFG), and the European Commission. The following researchers and research assistants (listed in alphabetic order) have contributed to the construction of GermaNet and accompanying software:
